FREE GUIDE · DAY 1 OF 5

Edit reels with Claude on your phone.

My exact prompt, the 5 steps, and the follow-up messages I use to fix anything, so you can copy and paste them straight away.

KARTHIK · FINLAND · CAREER · AI

THE PROCESS

5 steps. No laptop.

All you need is the Claude app on your phone and a raw video, ideally shot vertically in 4K.

1

Open Claude & upload

Open the Claude app and attach your raw video from Photos or Files.

2

Paste the prompt

Use the prompt on the next page. Add your script or captions with timestamps.

3

Let Claude edit

It plans the edit, builds the graphics and sound, and renders the video. Grab a coffee ☕

4

Don't like it? Just ask

Reply in plain words, like "make it brighter". See the fix-it list on page 4.

5

Download & post

Save the video, then ask for a thumbnail and an Instagram caption too.

COPY & PASTE

My exact prompt

Attach your video, paste this, and fill in the parts in orange.

COPY

```
Edit this video into an Instagram Reel (9:16, 4K).

• Add English captions synced to my voice, 2–3 words at a time, with key words highlighted.
• Add motion graphics and text effects for each point I make. Put big text BEHIND me on the background.
• Never cover my face with cards or text.
• Punch-in zooms on each new line, clean transitions.
• Add sound effects (whoosh, pop, click) that match the animations.
• Bright, clean colour. Cut the dead pauses.
• End with a Follow card for @your.handle.
• No watermark.

Here is what I say, with timestamps:
[paste your script / auto-captions here]
```

Speaking Tamil or another language? Paste the auto-captions from Edits, CapCut or Instagram with their timestamps, plus an English translation, so the captions line up exactly with your voice.

FIX ANYTHING

Follow-up messages that work

These are real messages I sent while editing my own reels. Just type them in the same chat.

`"Make it brighter, it looks dark"`	Fixes a moody or dark colour grade
`"Make it 4K and clearer"`	Re-renders sharper from your original file
`"Cards are hiding my face, move them"`	Moves graphics to the sides or behind you
`"Put the text behind me"`	The After Effects-style depth look
`"Screen recording on top, me at the bottom"`	Split screen for tutorials
`"Change my handle to @…"`	Updates the Follow card
`"Only use my current video"`	Removes extra clips
`"Give me a viral thumbnail"`	Creates a reel cover

PRO TIPS

Get a better edit on the first try

- Shoot against a plain wall. It leaves room for big text behind you and makes the cut-out cleaner.
- Pause for 1 second between points. That gives clean cuts and room for each graphic.
- Upload the original 4K file, not a compressed WhatsApp copy.
- Be specific when you ask for changes: say the second and what's wrong ("at 0:17 the card covers my face").
- Finish with the caption: "Write an Instagram caption with hashtags, with 'Comment X' at the top."
